**EPR Fact Sheet**

**Decision making**

The national crisis cell (CC) prepares all decisions on protective actions for approval by the Government. A member of the Government (typically the Minister of Interior) or a person designated by him presides over the national crisis center.

The CC is composed of 12 regular members, heads of all directly concerned ministries and administrations. It can be extended to another 8 members, depending on the situation. The head of the Radiation Protection Department (radiation safety authority) is one of the regular members.

The CC is further responsible for the coordination and the control of the protective and other response actions. Support is given by a communication cell (CCI), a radiological evaluation cell (CER) and, as appropriate, by one or more operational cells (mostly placed within the ministries).

**Advice**

The radiological evaluation cell (CER) consists of experts of the Radiation Protection Department (DRP) and of the Rescue Services Agency (ASS). The missions of the CER are to monitor and assess the radiological situation, to propose protective and other response actions to the CC and to prepare for hosting international assistance.

**Licensee**

There is no nuclear installation in Luxembourg. Through a bilateral agreement, the licensee of the closest foreign NPP has committed to inform the DRP without delay of any event fulfilling defined criteria.

**Alarming**

The alarming and the instructions regarding urgent protective actions and other response actions are triggered by the CC. The sirens are activated and the instruction is broadcasted by national and private radio stations and other media, including a dedicated website.

**Organizational structure**

- **Government (Decision)**
  - Crisis Cell (CC)
  - Radiological Evaluation Cell (CER)
  - Communication Cell (CCI)
  - Preparers decision and oversees the implementation
  - Advises CC
  - informs citizens

- **Operational Cells / Ministries (COP)**
  - Organizes the execution of particular protective or response actions

**Country info**

- Capital: Luxembourg
- Official language: Luxembourgish, French, German
- Population: 0.55 M
- Area: 2,000 km²
- Currency: Euro (€)
- Time zone: UTC+1
- Calling code: +352
- Internet TLD: .lu
- NPPs /ele. share: 0/0%

*The IAEA emergency preparedness category 1 and other relevant facilities

### Planning zones

The emergency is declared following the advise of the radiation protection authority or rescue services agency in situations with potential releases relevant from an health protection point of view.

Arrangements are in place for direct alert of the LU-authorities by the French operator.

**Planning radii:**
- Evacuation: 15 km (UPZ) can be extended to 30 km in the post-accidental phase.
- ITB and sheltering: 25 km (UPZ), full country (EPD) Ingestion and commodity planning distance: Full country

### Protection strategy

The aim is to consider the affected area as a whole, and to coordinate protective actions with the neighboring states. Generic reference levels (RLs) and operational reference levels (ORLs) are defined as given in the table below. These values allow for the necessary flexibility in decision taking for coordinating and aligning protective actions along the borders with the neighboring countries.

Protective actions may be taken at levels of effective or equivalent dose below an RL. In duly justified cases, actions may not be taken in exposure situations above the RL’s. ORLs serve as orientation values during the release phase. No criteria exist for automatically triggering actions.

### Criteria
